

# UTILITIES & INDUSTRIES

## Remanufacturing Natural Gas Meters

### 40 Day Challenge

Here at Utilities and Industries, we started a 40 Day Challenge to render healthy eating habits and get exercising into our everyday routine. To motivate our employees and co-workers we decided to make the healthy habits frenzy into a challenge. On February 18, 2015 was the beginning of the challenge and our first Company weigh in. The person who loses the most weight and body fat in the 40 days will win \$100. We're excited to see everyone so motivated to get healthy and we cannot wait to see everyone's transformation. The challenge we implemented is not mandatory, but encouraged to get a lot of people involved.

### Sale Item

**Limited Time Only!**

**Sale Price:** \$104.16

**Original Price:**  
\$232.03

Index drive 10FT,  
digits 5 direct read.  
Index includes 2  
mounting screws.

## Message from the CEO

Utilities and Industries has decided to expand their customer database geographically and become vendors in two major trade shows this year! We mentioned last newsletter it would be in the month of March and May, but we decided to take a different route. In July we will be attending a trade show in North Carolina, in August we will be attending a trade show in Pittsburgh, PA.

Expanding our services to the south and west is something we would like to focus on for the year 2015 and we feel the two gas shows in the upcoming months will help us achieve our goal.

We have been working hard and have already begun preparation with marketing, signage and exposure. Be sure you're staying tuned to see what our company has come up with next month!

## Employee of the Month

Every month we like to reward our employees for their hard-work and dedication to the Company.

Utilities and Industries nominated Rick Siple as Employee of the Month, for February 2015.

Rick has been rewarded in appreciation of his work. He performs to the best of his ability and performs other tasks not related to his job title to make sure the work gets done! Rick has also been a great help with minor maintenance repairs

Congratulations, Rick! Keep up the great work!

## Gas Meter Disposal

Instead of disposing meters you normally would have no use for, we are willing take them off of your hands. Call us today and discuss different options and pricing.

## Featured Product

Sensus field and high pressure service regulators combine simplicity of design with rugged construction, exceptional performance, and operational safety to provide dependable, flexible, and economical answers for pounds-to-pounds pressure regulation applications.

The Model 046 family of high pressure regulators is easy to install, adjust, inspect, and service in all piping arrangements.

Typical applications include farm taps, field regulator applications, and high pressure industrial air or gases. 1" NPT Field Regulator. Other sizes available upon request. Orifice and spring available and included with price.

Sensus 046

## Large Diaphragm

Repair Class Descriptions: These are U&I's normal accepted standards used for Repair Class Description; however, U&I will adjust to and use your specific standards as provided to meet your specific needs.

INTEST/ CONDEMN	Intest readings are recorded and meter is condemned per customer conditions.
OK	Meter is intested & meets customer specifications. Meter is cleaned/sand blasted as needed, out tested (with low flow test), leak tested, and painted to like new condition. No parts are replaced.
A	Meter is intested and does not meet customer specifications. Meter is cleaned / sand blasted as needed, adjusted in to customer specifications, out tested (with low flow test), leak tested, and painted to like new condition. Parts Included: Hand hole cover and screws, Index cover and screws.
B	Everything from class A repair plus: Remove top and disassemble components above table, reface valves and valve seats, test diaphragm and case for leaks, test index drive stuffing box for leaks, reseal as necessary. Parts Included: Top cover gasket, short flag arm, flag arm rivets, flag arm sleeves, axle box seals (or equivalent parts per kind and size of meter).
C	Everything from class B repair plus: Remove side covers. Parts included: side cover gaskets.
D	Everything from class C repair plus: Replace diaphragm. Parts included: diaphragm set.
